¹ SPYCE is provided by *METEOTEST* in collaboration with ENECOLO.

1. Subject and Scope of this Contract

With the SPYCE Basic internet portal, a reseller can manage and monitor the PV systems of his clients. He can enter his clients' addresses and register their PV systems.

The reseller is responsible for the correct registration of the details of his client's PV systems and the timely payment of the annual subscription costs to *METEOTEST*.

METEOTEST ensures that the reseller can manage his client's accounts and monitor their PV system's according to the two paragraphs above by himself. Registering a client's data for the reseller or supporting the reseller in the operation of the SPYCE web portal is not an element of the service provided by *METEOTEST* to the reseller.

2. Costs, Billing and Payment Terms

Setting up the SPYCE Basic internet portal account for a reseller by *METEOTEST* is free of costs.

The annual subscription fee per PV system is defined in the attached document "SPYCE Basic pricing model".

Outstanding annual subscription fees are billed bi-annually on April 1st and October 1st. Payments are due within 30 days.

The reseller's cancellation period for terminating this contract is one month. Subscription fees already paid will not be refunded. The termination of the contract has to be done in writing.

METEOTEST can cancel a reseller's contract by the end of each billing half-year (i.e. March 31 and September 30) with a cancellation period of 3 months. Ongoing annual subscriptions will be continued to the end of the respective subscription period.

The SPYCE's Terms and Conditions (see www.spyce.ch) are an integral part of this contract.

3. Access Rights for the Reseller's Clients

The reseller can set up a personal account for his clients on the SPYCE internet portal. This account is password-protected and enables a client to monitor his PV systems on the SPYCE internet portal. Within his account, a client can use all features and functions of the SPYCE internet portal with the exception of:

- Entering and editing his personal, account and PV system data
- Accessing the detailed failure detection view (only a summary is shown)
